### Standard Measurement Range

- This is the range of loads that each sensor model is ideally suited to measure. Factory adjustments to internal or external electronics allow custom measurement ranges to meet application-specific needs.

### Bolt Patterns

- The 75E20S4 sensors are available standard with English or metric bolt patterns.
- Customer-specified bolt patterns are possible at additional cost.

### Multi-axis Overloads

- Insert your estimated applied loads and the coefficients from the above table into the equations below to determine safe loading:

$$F_x/a + F_y/b + F_z/c + M_x/d + M_z/e \leq 1 \text{ and}$$

$$F_x/b + F_y/a + F_z/c + M_y/d + M_z/e \leq 1$$

Both equations must be satisfied to avoid damage.

- If additional overload capability is desired we recommend using a higher-rated sensor with its measuring ranges electronically lowered.
